## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the columns of a building must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 2 recites the limitation "the bending edges" in line 1. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Phillips (US 5,335,472) in view of Harris (US 3,333,379).

Art Unit: 3635

Phillips teaches exterior wall building comprising a wall surface framework 10, a plurality of connecting elements 40. The framework 10 consists of two corresponding open-weave mesh or net-like 53 having a plurality of holes sized for allowing concrete material to adhere onto the mesh 53 which inherently not allows the cement to pass through the holes and forming a wall thickness (col. 5, line 1-2), column 54. And connecting elements 40 having a plurality of engaging slots 44 (See figs. 1-7).

Phillips does not teach expressly at least one of the wave-like shaped plate or corrugated panels having a plurality of bending edges. Harris teaches resilient furring channel 10 having a plurality of wave-like shaped 16 and bending edges 12 (see figs 1, 4). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Phillips with Harris for the wave-like shaped or corrugated panels with having a plurality of bending edges. The motivation for doing so would have been provide the building wall panels more integrity and will not have a lots of deflections when spraying the concrete material onto the wall panels.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lu (US 5,528,876), Nicosia (US 3,872,636), Gutjahr (US 6,151,854), Hill (US 5,996,292), Maylon (US 6,367,216), Kuo (US 5,579,620), Schneller (US 4,578,915), Moreno et al. (US 5,216,859) teach wall construction.
